

Dynamic and forward-thinking Engineering Director with more than 20 years of experience and expertise in all type of application architecture and AWS Cloud Computing. Powerful strengths in strategic thinking, leadership, problem solving, and the ability to adapt to multiple challenges. Extensive global experience leading software development teams, developing and implementing scalable web solutions, and delivering high quality, highly functional web applications. Excellent management and relationship building skills in creating dynamic & motivated teams. Champion full-lifecycle infrastructure development, automation, and integration projects delivery and continuous improvement. Deliver a company culture in which staff members feel comfortable voicing questions and concerns, as well as contributing new ideas that drive innovation, efficiency, and company growth.

- IT Operations Management
- Best Practices
- Strategic Planning & Analysis
- Written/Oral Communication
- Digital Supply Chain
- Scalable IT Solutions
- Team Leadership
- Cloud Application
- Enterprise Architecture
- Information Security
- Stakeholder Relations
- Complex Problem Solving

Professional Experience

Sony Pictures Entertainment • November 2004 to Present

Executive Director – Solution Architecture

Spearhead \$50M-plus IT initiatives across television network, sales, distribution, and finance verticals. Lead multiple high performing engineering teams and deploy end-to-end mission-critical IT roadmaps and recommended key changes. Report directly to SVP.

- Implemented the first Application in AWS Cloud at Sony Pictures Entertainment
- Oversee day-to-day IT operations and a global engineering team of 100+.
- Deliver input on the enterprise architecture for 17 years.
- Leverage mastery of the IT landscape to pitch closely aligned technology solutions.
- Interface with technical and business stakeholders.
- Head QA testing and release management teams.
- Partner with Transform Corporate Function team for technical architect consultancy and application development services.
- Build high-performing software engineering teams and introduced engineering best practices across the organization.
- Play key role in \$MM digital transformation initiative.
- Direct migration from a local data center to AWS cloud in collaboration with an infrastructure development team. Provide consistent feedback on the progress of the project.
- Execute vital role as part of the Enterprise Engineering Service Group by strategizing cost reduction and process streamlining initiatives. This included containerization, information security, code quality, and application development.
- Guide studio leaders on adoption of in-house system and content supply chain.
- Participate in Enterprise Infrastructure Services and Cloud Center of Excellence groups.

Major Projects

Digital Supply Chain Platform (Media Center Manager)

High-Impact IT Initiatives

- Leading the team of 15 engineers
- Reduced content preparation costs by 50% and delivered 80K+ digital assets in 2020 by architecting an \$18M digital supply chain platform to support the TV Network unit with 150+ channels generating \$2B revenues and reaching 1.3B viewers.

- Lowered vendor costs and streamlined workflows by leading insourcing of digital asset management processes.
- Seamlessly hosted 3.5-petabyte metadata in AWS S3. Directed AWS configurations and application integrations using VPC, subnets, security groups, network access control lists (ACL), custom policies, API gateway, Parameter Store, and CloudFront.
- Led seamless MCM integration with ODIN and third-party applications, including Vidispine for digital content management and transcoding.
- Improved digital content management workflows by guiding the development of a microservices orchestration layer using Apache Activiti.
- Developed reference architectures for serverless technologies.
- Cut AWS operational costs by 65%, from \$100K to \$35K/month, by onboarding AWS Lambda and API Gateway using Python and SAM Templates.
- Seamlessly led features development and application by formulating a global full stack developer team of 20.
- Drove employees to acquire AWS certifications. Enhanced team capability to modify and integrate architecture into the application.

Virtual Cloud Edit (VFX) Work Stations

- Ensured uninterrupted remote content editing during the COVID-19 pandemic by architecting a cloud solution.
- Hosted 60+ video editing workstations in AWS to run Adobe Premium Pro and tools using teradici technologies.

ODIN (TV Networks Integration Platform)

- Lead the team of 15 Engineers
- Achieved 30% operational costs savings after leading deployment of a \$10M integration platform, ODIN, using JBoss Fuse ESB SOA and Apache Activiti. Eliminated components redundancy and improved service reusability.
- Lowered downtime and prevented data duplication by architecting global integration of title metadata.

Global Content Promotion Management System

- Lead the team of 5 Engineers
- Enabled 2,500 promo releases per month, reduced costs by 40% and built an \$8M promotional and content management platform using AngularJS, Bootstrap, Node.js, and Sprint Boot.
- Increased viewership and sales revenue by streamlining promotional content creation and management processes.

Revenue Pipeline Management

- Leading the team of 30 Engineers.
- Boosted YoY revenue by 40% in leading a shift from a legacy system to a web-based application to support international deals and rights management.
- Revenue Pipeline Management is a custom-built application which supports Sony's roughly 2.5 Billion dollar television distribution line of business. It allows that sales organization to manage their deals and budgets. RPM covers a range of functionality, from Availability searching - showing sales planners when and where any given title is available to sell - to managing and reporting on sales and revenue numbers that comprise the budget. In between there are also tools for Sales Planning, Deal Management, Revenue Recognition, and Product Management, as well as various types of general reporting

Cash-to-Contract Application

- Leading the team of 15 Engineers
- Ensured accurate tracking of revenue collection from multiple channels by strategizing and executing the development of a Cash-to-Contract application.
- Developed and implement a comprehensive data security strategy that protects and secures all financial data stored and utilized during normal operations.
- Provided adequate internal control structure for financial records.

Education

Masters in Computer Management, Institute of Business Management & Research, Pune, India

Certifications

I React.js Essential Training, LinkedIn (2021); AWS Certified Solution Architect – Associate (2018), Scrum master

Tools

Cloud: Amazon Web Service: EC2, VPC, Subnets, AWS Lambda, AWS API Gateway, AWS Cognito, AWS SDK, AWS SAM, VPC Endpoints, AWS RDS, AWS S3, AWS Code pipeline, DynamoDB, MemoryDB, Aurora

Architecture & Design: Cloud Application Architecture, Digital Supply Chain, Enterprise Application Integration, Service Oriented Architecture, Microservice Based Architecture, Serverless Application Architecture, REST, Responsive Web Application

Languages: Java, C#, COBOL, Visual Basic, Visual Basic.NET, SQL PLUS, Python, JavaScript

Technologies: Spring, Hibernate, Spring Boot, Docker, Node.js, React.js, Angular.js, Bootstrap, Maven, Swing, JMS, SOAP, JPA, JSF, J2EE, EJB, JUnit, JDBC, Servlet, Apache Ant, Apache Tomcat, Apache Struts, Eclipse, Oracle Weblogic Server, JBoss Fuse, Jenkins, HTML, XML, Ajax, J2SE, UML, Solr

RDBMS: Oracle, MS SQL Server, MySQL

NOSQL DB: DynamoDB, MongoDB
